Chapter-04 Principles of Inheritance

Rajeshkumar Principal K V No.1, Devlali

(Adopted for educational social service purpose only).

MULTIPLE CHOICE QUESTIONS PRINCIPLES OF INHERITANCE AND VARIATION

WWW.SSSFEP.COM

6.	Which principle of inheritance was not given by Mendel					
	a)Independent assor	rtment	b)Dominance			
	c) Purity of gametes	S	d)Linkage			
	Ans: b					
7.	When dominant BB parental genotype is		ossed, the percentage of	of progeny showing the		
	a)0%	b) 25%	c) 50%	d)75%		
	Ans: b			d)75%		
8.	The year 1900AD is	s highly significant for	genetics due to			
	a)Chromosome theo	ory of heredity	b) Discovery of gen			
	c) Rediscovery of M	Mendelism	d)Principle of linka	ge 🔎 🤊		
	Ans: a					
			^	y		
9.	The process by which the segregation of Mendelian factors takes place is					
	a)Hybridisation	b)Mitosis	c)Meiosis	d) Fertilisation		
	Ans: c					
			OXX			
10.	Which would most probably be the genetic makeup of the parents of a colour blind daughter? a)Carrier mother and normal father b) Carrier mother and color blind father					
	c) Color blind mother and normal father d)Normal mother and normal father					
	Ans: a	120				
11.	If a heterozygous tall plant's crossed with a homozygous dwarf plant the proportion of dwarf progeny will be a)25% Ans: b c)75% d)100%					
	a)25%	b)50%	c)75%	d)100%		
	Ans: b					
12.	When we tall plant of parent plants is	s are crossed 45 tall plants	ants and 14 dwarf plan	ts are obtained. The genotype		
	a)TT X TT	b)TT x tt	c)Tt x Tt	d)TT X Tt		
	Ans: c					
13.	Which of the follow	ving is not a dominant of	character selected by N	Mendel in Pisum?		
	a) Yellow pod color	•	b) Violet flower col	our		
	c) Axillary flowers		d) Yellow seed colo	our		
	Ans:c					

14.	Variation can occur due to						
	a) Mutations	b) Recombination	c) Fertilisation	d) All of these			
	Ans: c						
15.	Who discovered the	ne phenomenon of incom	plete dominance in N	Mirabilis and Antirrhinum?			
	a) De Vries	b) Bateson	c) Carl Correns	d) Davenport			
	Ans: d						
				Oe Vali			
16.	How many types of	of gametes are produced	by a trihybrid?	\mathcal{O}^{\bullet}			
	a) 3	b) 4	c) 8	d) 16			
	Ans: b			1			
17.	A dihybrid heterozygous tall plant with round seed is crossed with a similar genotype, what percentage of plants should possesTtRr genotype?						
	a) 6.25%	b) 12.5%	c) 25%	d) 75%			
	Ans: c		c) 25%				
18.	A cross by changing the source of ovum is						
	a) Back cross	b) Test cross	c) Monohybrid	d) Reciprocal cross			
	Ans: d						
19.	When the phenotypic and genotypic ratios resemble in the F2 generation it is an example a) Independent assortment b) Qualitative inheritance						
	c) Segregation	· 200	d) Incomplete dom	inance			
	Ans: b	<i>3</i> 7					
20.	In what situation, the phenotype of a dihybrid cross would exhibit parental combination of character in more than the expected value and recombination in less than the expected value.						
	a) When genes are	a) When genes are in mitochondria					
	b) When duplicate	genes are present					
	c) When genes are	e linked					
	d) When supplement	entary genes are present					
	Ans: a						

WWW.SSSFEP.COM

21.	When the dihybridTtrr plants are self-fertilized, what percentage of descendants would be heterozygous for one character and homozygous for another?					
	a) 25%	b) 50%	c) 75%	d) 100%		
	Ans: d					
22.	In a double heterozy illustrate the law of	gous plant, (Eg: Aa Bl	o) four types of gamete	s are produced. This		
	a) Dominance	b) Segregation	c) Purity of gametes	d) Independent assortment		
	Ans: d			d) Independent assortment		
23.		essive parent is called				
	a) Monohybrid crossAns: d	b) Multiple cross	c) Single cross	d) Test cross		
24.	If a gene has multipl	e effects, it is called	2.			
	a) Multiple allelism	b) Pleiotropism	c) Polygeny	d) Epistasis		
	Ans: b					
25.	Maize has 10 pairs of chromosomes. How many linkage groups should it possess					
	a) 5	b) 10	c) 20	d)40		
	Ans: b	f chromosomes. How is b) 10				
26.	Linked genes may be separated by					
	a) Gene mutation	b) Polyploidy	c) Segregation	d)Crossing over		
	Ans: c	5				
27.	Crossing over it diploid organism is responsible for					
	a) Recombination of	linked gene	b) Segregation of alleles			
	c) Dominance of gen	es	d) Linkage between genes			
	Any b					
28.	Crossing over takes p	place between				
	a) Sister chromatids of	of homologous chromo	osomes			
	b) Non sister chroma	tids of homologous ch	romosomes			
	c) Sisters of non-hom	nologous chromosomes	S			
	d) DNA and RNA					
	Ans: b					

29.	If the distance between genes on a chromosome is more, the linkage strength is					
	a) More	b) Less	c) Unaffected	d) More in somatic cells		
	Ans: b					
30.	Drosophila melano	ogaster has				
	a) 2 pairs of autoso	omes and 1 pair of sex cl	nromosomes	•		
	b) 3 pairs of autoso	omes and 1 pair of sex cl	nromosomes	seviali.		
	c) 1 pair of autosor	mes and 3 pairs of sex ch	nromosomes			
	d) 2 pairs of autoso	omes and 2 pairs of sex of	chromosomes			
	Ans: d					
31.	A trisomic individ	ual has a chromosomal r	number of	12 2		
	a) 2n-1	b) 2n +2	c) $2n + 1$	$\frac{1}{2}$ 2 $n + 3$		
	Ans: b			•		
32.	Among the following which one is the best chemical for inducing the polyploidy?					
	a) Ethylene	b) Colchicine	c) Agrilines	d) Mustard gas		
	Ans: a		Str			
33.	Down's syndrome	is an example of				
	a) Monosomy	b) Trisomy	c) Triploidy	d) Eupolyploidy		
	Ans: b					
34.	Which of the follo	owing to 6x (hexaploid) v	wheat?			
	a) Triticum durum	• 0	c) T.aestivum	d) Triticale		
	Ans: c		,	,		
35.	The holandric genes are located on					
	a Mitochondria	b) X- chromosome	c) Y-chromosome	d) Polytene chromosome		
	Ans: b	,	ŕ	, -		
36.	If the haploid num monosomic is	ber of chromosomes in a	a plant is 12,then the n	umber of chromosomes in		
	a) 22	b) 23	c) 25	d) 26		
	Ans: b					

37.	Alleles are paired in						
	a) In zygote		b) In diploid organ	nism			
	c) Dihybrid		d) All of these				
	Ans: c						
38.	Inheritance of flower	r colour is an exampl	e of incomplete domi	nance, which is seen in:			
	a) Antirrhinum	b) Pisum	c) Solanum	d) Hibiscus			
	Ans: c			j			
				Jestali Destali			
39.	Haemophilia most li	kely originated as a r	result of	$\mathcal{O}^{\varnothing}$			
	a) The separation of two homologous chromosomes						
	b) A non disjunction of chromosome number 21						
	c) The crossing over to two sex chromosomes						
	d) A gene mutation in the X-chromosome						
	Ans: d						
40.	c) The crossing over to two sex chromosomes d) A gene mutation in the X-chromosome Ans: d Chromosome complement with 2n-1 is called as a) Monosomy b) Trisomy Nallisomy d) Tetrasomy Ans: d						
	a) Monosomy	b) Trisomy	Nallisomy	d) Tetrasomy			
	Ans: d		ar V				
41.			tion is found in a disea				
41.	a) Night blindness	ample of point matar					
	c) Down's syndrome		b) Turners syndro				
	Ans: d		d) Sickle cell aner	IIIa			
	•,	2					
42.	In which of the lowing, females are heterogametic						
	a) Humans	b) Grasshopper	c) Drosophila	d) Fowl			
	Ans:.a						
43.	Gynaecomastia is a common feature seen in:						
	a) Down's syndrome		b) Turner's syndrome				
	c) Cystic fibrosis		d) Klinefelter's syndrome				
	Ans: d						
44.	XO type of sex deter	rmination is seen in:					
	a) Man	b) Grasshopper	c) Drosophila	d) Birds			
	Ans: a						
	WWW.SSSFEP.COM						

45.	Which of the following is not a Mendelian disorder?						
	a) Haemophilia Ans: d	b) Cystic fibrosis	c) Thalesemia	d) Turner's syndrome			
46.	How many type of	phenotypes possible fo	or ABO blood group				
	a) 2	b) 3	c) 4	d) 1			
	Ans: d						
47.	A person affected v	with phenylketonuria, l	acks an enzyme that o	converts the amino acid d) Tyrosine			
	a) Valine	b) Proline	c) Histidine	d) Tyrosine			
	Ans: a			, ~ ~			
48.	Haemophilia in ma	n is due to	^	\ າ ´			
	a) Sex-linked inheritance		b) Sex-limited in the	éritance			
	c) Sex-influenced inheritance		d) Primary non-dis	sjunction			
	Ans: d		. Prince				
49.	In XO type of sex	In XO type of sex determination					
	• •	e two different types ${\mathfrak A}$	A .				
	b) Males produce t		ametes				
	c) Females produce gametes with chromosome						
	d) Males produce single type or gametes						
	Ans: b						
	6						
50.	Which one of the following cannot be explained on the basis of Mendel's Law of Dominance?						
	a) Factors occur in pairs						
	b) The discrete uni	b) The discrete unit controlling a particular character is called a factor					
	c) but of one pair of factors one is dominant, and the other recessive						
	d) Alleles do not sl	d) Alleles do not show any blending and both the characters recover as such in F2 generation					
	Ans: b						
51.	The genotyne of a	plant showing the dom	inant nhenotyne can l	be determined by :			
J1.	a) Back cross	b) Test cross	c) Dihybrid cross	d) Pedigree analysis			
	Ans: d	<i>oj</i> 1631 61033	c, Dinyond cross	a) i cargico anarysis			

52.	Which one of the f in the given examp	•	correctly describes the man	nner of determining the sex
	a) XO condition in	n humans as found in	Turner syndrome, determ	nines female sex
	b) Homozygous se	x chromosomes (XX)	produce male in Drosoph	nila
	, , , , , ,		determine female sex in b	
	,	` ′	ine male sex in grasshopp	
	Ans: b			Ś
53.	F2 generation in a same as 1:2:1. It re		wed that both genotypic ar	nd phenotypic ratios are
	a) Monohybrid cro	ss with complete don	ninanace	
	b) Monohybrid cro	ss with incomplete do	ominance	1 2
	c) Co-dominance			
	d) Dihybrid cross		A .	Y
	Ans: b		. 221.	7
54.	Alleles which can	express only in pair w	vith similar allele is	
	a) Dominant		b) Recessive	
	c) Co dominant		d Lethal	
	Ans: d	_	OK .	
55.	Among the followi	ing traits that Meddel	studied, choose the reces	sive one
	a) Yellow pods	b) Axile flower	c) Terminal flower	d) Green seed
	Ans: b	SI	,	,
56.	When a dominant the parental general	-	aa' are crossed percentage	of the progenies showing
	a) 0%	b)25%	c)50%	d) 100%
	a) 0% Ans: d			
57.		have their first child	as colourblind ,marries a was a daughter. What are th	women whose father is also be chances that this child
	a) 25%	b) 50%	c)100%	d)0%

58.	The incorrect statement with regard to Haemophilia is a)lt is sex linked disease					
	b) It is a recessive disease					
	c) It is a dominant di					
	,	nvolved in the clotting	of blood is affected			
	Ans: d	· ·				
59.	Person with blood g	roup AB is considered	as universal recipient	because he has		
	a) Both A and B anti	bodies in the plasma				
	b) No antigen on RE	BC and no antibody in	the plasma	because he has		
	c) Both A and B anti	gens in the plasma but	no antibodies in the pl	asma		
	d) Both A and B antigens on RBC but no antibodies in the plasma					
	Ans: d		,			
60.	A patient with unknown blood group needs immediate blood transfusion. The group that can be donated will be					
	a) Blood group o	b) Blood group AB	c) Blood group A	d) Blood group B		
	Ans: c		ain			
61.	Which Mendelian idea is depicted by a cross in which the F1 generation resembles both parents					
	a) Incomplete domir	nance	b) Inheritance of 1 ge	ene		
	c) Co-dominance		d) Multiple allelism			
	Ans: c					
62.	An F2 hybrid genera	tion will have				
	a) 4 types of genoty		b) 7 types of genotyp	es		
	c) 9 types of genoty	pes	d) 16 types of genoty	pes		
	Ans: d					
63.	Who among the following is not concerned with re-discovery of Mendelism					
	a) Von Tschermak	b) Carl Correns	c) TheodreBovery	d) HugodeVries		
	Ans: d					
64.	The diploid number of	of drosophila melanoga	aster			
	a) 4	b) 8	c) 16	d) 12		
	Ans: b					

65.	Linkage phenomenon explained first by					
	a) William Batson	b) T.H. Morgan	c) AlfsedSturtevent	d) Johanson		
	Ans: a					
66.	Who put forward the	crossing theory of reco	ombination			
	a) Gregor Mendel	b) Wiliam Bateson	c) Janssen	d) T.H. Morgan		
	Ans: a					
				Devlai:		
67.	In honeybees			\mathcal{O}^{C}		
	a) The males have on	aly one set of chromoso	omes	1 2		
	b) The males have sin	ngle sex chromosomes		1		
	c) Males produce pro	jeny by parthenogenes	is			
	d) Both (a) and (c)		2)		
	Ans: d		is cipal.			
68.	First child of a norma affected will	al couple is phenylketo	uric. The probability o	of second male child is		
	be	.				
	a) 0%	b) 25%	c) 50%	d) 100%		
	Ans: a					
69.	Mutation of any sing	le gene maybe				
	a) Micromutation	b Point mutation	c) Gene mutation	d) All of these		
	Ans: c					
70.		e father was haemophil ave their first child as o		hose father was hance that this could be		
	a) 25% Am. c	b) 50%	c) 0%	d) 100%		
71.	Thallasemia beta is lo	ocated on				
		b) 16th chromosome	c)9th chromosome	d) 12th chromosome		
	Ans: a	,	,	,		

72.	Choose the sex influenced trait						
	a) Ovary in female	b) Hypertrichosis	c) Haemophilia	d) Pattern baldness			
	Ans: c						
73.	Clotting factors VIII	is absent in					
	a) Haemophilia A Ans: c	b) Haemophiia B	c) Thalassamia beta	, , , , , , , ,			
74.	Pedigree analysis is	useful for		Seviali			
	a) Study of inheritan	a) Study of inheritance when arranged mating is not possible					
	b) Study of sex linked inheritance in man						
	c) Study of Mendelian disorders in man						
	d) All of these						
	Ans: a		\				
75.	Ans: a Choose the incorrect statement regarding haemophilia a) It is x-linked b) It is dominant in male c) it inherit from father to daughter d) A single protein in cascade of several proteins involved in clotting is affected						
	a) It is x-linked						
	b) It is dominant in a	nale					
	c) it inherit from father to daughter						
	d) A single protein in cascade of several protiens involved in clotting is affected						
	Ans: c		Y				
76.	Choose the wrong st	atement					
	a) Mental retardation carries the effect of phenyl pyruvic acid						
	b) Thallasemia is a quantitative problem						
	c) Sickle cell anemia person produce abnormal Hb						
	d) Cystic fibroxis quantitative						
	Ans: c						
77.	Which of the follow	ing cannot be detected	l in developing foetus b	y amniocentesis /			
	a) Klinefelter syndro	ome	b) Sex of the foetus				
	c) Down syndrome		d) Jaundice				

Ans: c

78.	Which mendelian idea is depicted by a cross in which the F1 generation resembles both the parents?						
	a) Incomplete dor	ninance	b) Law of domina	nce			
	c) Inheritance of	one gene	d) Co-dominance				
	Ans: c						
79.	If both parents are carriers of thalassemia, which is an autosomal recessive disorder, what are the chance of pregnancy resulting in an affected child?						
	a) No chance	b) 50%	c) 25%	d)100%			
	Ans: b			d)100%	, O		
80.	A human female	with Turner's syndro	me				
	a) Has one additional X chromosome						
	b) Exhibits male	characters		1			
	c) is able to produ						
	d) Has 45 chromosomes with XO						
	c) is able to produce children with normal husband d) Has 45 chromosomes with XO Ans: b Which of the following cannot be expected on the basis of Mendel's law of dominance						
81.	a) It explains theb) It explain expresc) It explains the	expression of one of ession of both traits: 3:1 ratio in F 2	the parental traits in F1				
82.	When heterozygous yellow round seed plants and self-fertilized, the frequency of occurrence of RrYY genotype arrong the offspring's is						
	a) 1/16	b) 3/16	c) 2/16	d) 4/16			
	Ans: a						
83.	A person homozygous for autosomal loci 'a' and 'b' and heterozygous for gene 'p' shall produce how many types of gametes in respect of these loci						
	a) 1 type	b) 2 types	c) 3 types	d) 4 types			
	Ans: b						
84.	Experimental pro-	of for chromosome t	heory of inheritance is gi	ven by			
	a) Sutton	b) Sutton and E	Bovery c)TH Morgan	d) Sturtevent			
	Ans: d						
	WWW.SSSFEP.COM						

	The nuclear structure observed by Henking in 50% of the sperms in the testes of a insect was termed				
	a) X-body	b) Bar body	c) Polar body	d) Chromatin	
	Ans: c				
86.	First artificial r	nutation was induced in			
	a) Barley	b) Maize	c) Drosophila	d) Neurospora	
	Ans: c			121.	
87.	Hemophilic per chance that a ha	son marries a girl having nemophilic child is born	g no history of the diseat to them	ase in her pedigne. What is the	
	a) 0%	b) 25%	c) 50%	d) 73% 7	
	Ans: a			1	
		b) 25% 2019 Segn Aling 2019 Segn Aling	Rincill Rincill
